

FOR IMMEDIATE RELEASE

Demo the New Verifit2 Fitting System at AudiologyNOW!

Visit Audioscan at booth #301 to test drive the industry's only binaural fitting system.

Dorchester, Ontario, February 16, 2015. The new Verifit2 from Audioscan is the only hearing instrument fitting system that delivers binaural verification – both on the ears and in the text box. Designed to respond to the latest hearing aid technologies, Verifit2 enables professionals to take complete control of their fittings. Visitors to the Audioscan booth will experience the exciting new features and benefits of the Verifit2, including:

Binaural test box. Verifit2 includes the world's first binaural test box, enabling simultaneous binaural measures for electroacoustic analysis or verification of binaural features. Results are quickly and intuitively achieved.

Extended bandwidth verification. The Verifit2 system analyzes to 16 kHz, providing you with the complete picture of today's extended bandwidth hearing aids. The system comes with all the necessary hardware including wideband couplers and REM/HIT transducers.

Timesaving enhancements. Quick-connect coupling, 60% fewer cables, streamlined Speechmap® interface, and binaural operation all enable professionals to make fully informed decisions for their patients faster. In addition, professionals attending AudiologyNOW! can see Verifit2's new modern design, adaptable setup, and learn about its full complement of data management options. Audioscan looks forward to seeing you in San Antonio!

For more information about Verifit2, please [contact Audioscan](#) or visit www.audioscan.com or the [Audioscan Expo Page](#) on AudiologyOnline.
